# MESSAGE FROM THE MANAGING DIRECTOR

**Dear Clients, Partners and Stakeholders,**

It is my pleasure to welcome you to Somara Engineering & Construction Ltd.

Since our establishment in 2015, Somara has been built around a straightforward principle: good construction begins with good engineering, careful planning and a strong sense of responsibility.

Somalia is experiencing an important period of development, creating increasing demand for reliable buildings, infrastructure, water facilities, commercial spaces and other essential projects. We believe engineering and construction companies have an important responsibility to contribute to this development by delivering work that is safe, functional, durable and appropriate to the needs of the communities we serve.

At Somara, we approach every assignment with attention to technical requirements, project objectives, quality, cost and schedule. We work to understand our clients' needs before developing practical solutions and maintain close coordination throughout project implementation.

Our ambition is not simply to construct buildings or infrastructure. It is to establish long-term relationships based on professionalism, transparency, accountability and dependable service.

We are committed to continuously strengthening our technical capabilities, developing our people and adopting better approaches to project delivery. As Somara grows, we intend to expand our capacity while maintaining the professional standards on which the company was established.

We thank our clients, partners, employees and stakeholders for their confidence and support. We look forward to contributing to Somalia's development through engineering excellence and responsible construction.

**Managing Director**
**Somara Engineering & Construction Ltd.**

# COMPANY **OVERVIEW**

## About Somara Engineering & Construction Ltd.

Somara Engineering & Construction Ltd. was established in 2018 with the objective of providing professional engineering and construction services for the growing development needs of Somalia.

The company brings together engineering, construction and project-management capabilities to provide clients with practical solutions from the early planning and design stages through to construction, supervision and completion.

Somara understands that every project has its own technical, financial, operational and environmental requirements. Our role is therefore to work closely with clients and project stakeholders to understand those requirements and translate them into effective project solutions.

Our activities are centered on building construction, civil engineering, infrastructure development, engineering design, project management and construction supervision.

We aim to maintain a professional working environment in which technical knowledge, careful planning, quality workmanship and accountability are treated as essential elements of successful project delivery.

## Our Vision

To become a trusted engineering and construction company in Somalia, recognized for professional project delivery, technical capability, quality workmanship and meaningful contribution to national development.

## Our Mission

To provide dependable engineering and construction solutions through skilled professionals, sound technical practices, effective project management and a strong commitment to quality, safety and client satisfaction.

# Our Core Values

### Integrity

We conduct our business with honesty, transparency and respect for our commitments. We

### Quality

We believe quality must be incorporated into every stage of a project, from planning and design through construction and completion.

### Professionalism

We maintain professional standards in our engineering, management, communication and field operations.

### Accountability

We take responsibility for our work and maintain clear communication with clients and project stakeholders.

### Safety

We recognize the importance of protecting workers, clients, communities and the surrounding environment.

### Teamwork

Successful construction requires cooperation between engineers, contractors, suppliers, clients and other stakeholders.

# OUR SERVICES

## Integrated Engineering & Construction Solutions

Somara Engineering & Construction Ltd. provides integrated engineering and construction services designed to support projects from initial concept and technical planning through construction, supervision and completion.

Our services are structured to respond to the practical requirements of clients across building construction, civil works, infrastructure development and related engineering activities.

*We combine technical planning, field execution and project coordination to deliver solutions that are functional, durable and appropriate to each project's requirements.*

## Civil Engineering & Infrastructure

- Site development and preparation
- Earthworks and excavation
- Land grading and leveling
- Road and access-way construction
- Internal roads and pathways
- Drainage and stormwater systems
- Culverts and associated structures
- Concrete and civil works
- Foundation-related civil works
- Infrastructure rehabilitation and improvement

Our civil engineering approach begins with understanding site conditions and project requirements, followed by appropriate planning, construction and supervision.

## Building Construction

We undertake building construction projects for residential, commercial, institutional and other facilities.

*Our building construction services cover different stages of construction, including:*

- Site preparation
- Foundation works
- Reinforced concrete works
- Structural works
- Blockwork and masonry
- Roofing works
- Flooring and tiling
- Doors and windows
- Plastering and finishing
- Painting and decoration
- Plumbing and drainage installations
- Electrical installation coordination
- External works and landscaping

*Somara emphasizes coordination between structural, architectural, mechanical, electrical and civil requirements to achieve an integrated finished facility.*

*Whether constructing a new building or completing an existing development, our objective is to deliver functional spaces that meet the client's intended use and project specifications.*

## Structural Engineering

Structural integrity is fundamental to the safety, durability and performance of every building.

***Somara provides structural engineering support for building and construction projects, including:***

- Structural assessment
- Structural planning
- Foundation design support
- Reinforced concrete structures
- Structural steel works
- Columns and beams
- Slabs and structural framing
- Structural detailing
- Technical coordination
- Construction-stage structural supervision

## Architectural Design & Engineering Consultancy

Somara supports clients during the early stages of project development by helping translate project requirements into practical design and engineering solutions.

***Our consultancy services may include:***

- Concept development
- Architectural planning
- Space planning
- Preliminary design
- Engineering design coordination
- Technical drawings
- Structural design coordination
- Site assessment
- Technical specifications
- Quantity and cost estimation support
- Construction documentation
- Design review

## Roads & Transportation Infrastructure

- Access roads
- Internal development roads
- Road rehabilitation
- Road improvement works
- Earthworks and subgrade preparation
- Drainage associated with road construction
- Culverts and crossings
- Concrete road elements
- Roadside works
- Site access infrastructure

## Water Supply & Sanitation

Somara supports the development and improvement of water and sanitation infrastructure where required by the project.

***Our services may include:***

- Water supply infrastructure
- Water distribution networks
- Drainage systems
- Sanitation infrastructure
- Wastewater-related civil works
- Water storage facilities
- Pipe installation
- Utility trenches
- Pumping and associated civil works
- Rehabilitation of existing systems

## Project Management & Construction Supervision

Effective project management is essential for controlling time, cost, quality and resources. Somara provides project management and

***supervision services covering:***

- Project planning
- Work scheduling
- Site mobilization
- Contractor coordination
- Subcontractor coordination
- Material coordination
- Resource planning
- Progress monitoring
- Site inspections
- Quality monitoring
- Technical coordination
- Client reporting
- Project documentation
- Completion and handover coordination

## Renovation, Rehabilitation & Maintenance

Existing buildings and facilities often require improvement, repair or adaptation to meet changing operational needs.

***Somara provides renovation and rehabilitation services that may include:***

- Building refurbishment
- Structural repair
- Interior renovation
- External renovation
- Roofing repair and replacement
- Flooring replacement
- Wall and ceiling works
- Plumbing repairs
- Electrical works coordination
- Facility improvement
- Maintenance works
- Rehabilitation of civil infrastructure

## Commercial & Institutional Construction

Somara supports the development of facilities for businesses, institutions and organizations.
***Potential applications include:***

- Office buildings
- Commercial facilities
- Educational facilities
- Healthcare facilities
- Community buildings
- Institutional offices
- Warehouses and storage facilities
- Hospitality facilities
- Multi-purpose buildings

We recognize that commercial and institutional facilities must balance functionality, durability, operational requirements and construction quality.

# Procurement & Construction Support

Construction performance depends heavily on the availability and suitability of materials, equipment and other project resources.

***Somara can support project procurement and construction coordination through:***

- Material planning
- Supplier coordination
- Material sourcing
- Delivery coordination
- Construction material inspection
- Equipment coordination
- Site logistics
- Material storage planning
- Procurement documentation

*Our objective is to support uninterrupted project implementation while maintaining appropriate attention to quality, specifications and project requirements.*

# ENGINEERING & CONSTRUCTION **CAPABILITIES**

## Our Technical Capabilities

Somara approaches engineering and construction as an integrated process rather than a series of disconnected activities.

Our technical capability is built around **planning, design, construction, supervision and project coordination.**

### Planning & Design

Every successful project begins with an appropriate understanding of the client's requirements, site conditions, technical specifications, budget and implementation objectives.

Our engineering approach focuses on developing practical solutions that can be effectively implemented within the project's requirements.

### Construction Management

Construction requires disciplined coordination between people, materials, equipment, subcontractors and schedules. Our project teams work to coordinate these elements throughout implementation.

### Site Supervision

Effective supervision is essential to maintaining quality and identifying potential issues before they become major problems. Site activities are monitored against project requirements, drawings, specifications and agreed standards.

### Quality Control

Quality is addressed throughout the project rather than only at the final stage. Materials, workmanship and completed works should be checked against the applicable project requirements.

### Technical Coordination

Engineering projects often involve multiple disciplines and stakeholders. We emphasize communication between the client, engineers, contractors, suppliers and site teams to maintain alignment throughout the project.

# OUR APPROACH TO **PROJECT DELIVERY**

*From Concept to Completion*

Somara follows a structured approach to project implementation designed to provide clients with greater clarity and control throughout the construction process.

## 01
### Understanding the Requirement

We begin by understanding the client's objectives, functional requirements, site conditions, budget considerations and expected outcomes.

## 02
### Planning & Design

The project is developed through appropriate engineering, architectural and technical planning. Key project requirements are identified before construction begins.

## 03
### Cost & Resource Planning

Materials, labor, equipment, timelines and other resources are considered to establish an appropriate implementation strategy.

## 04
### Procurement & Mobilization

Required materials, equipment and personnel are organized and mobilized according to the project schedule.

## 05
### Construction

Construction activities are carried out under appropriate technical and site supervision, with attention to drawings, specifications, safety and quality.

## 06
### Quality & Progress Monitoring

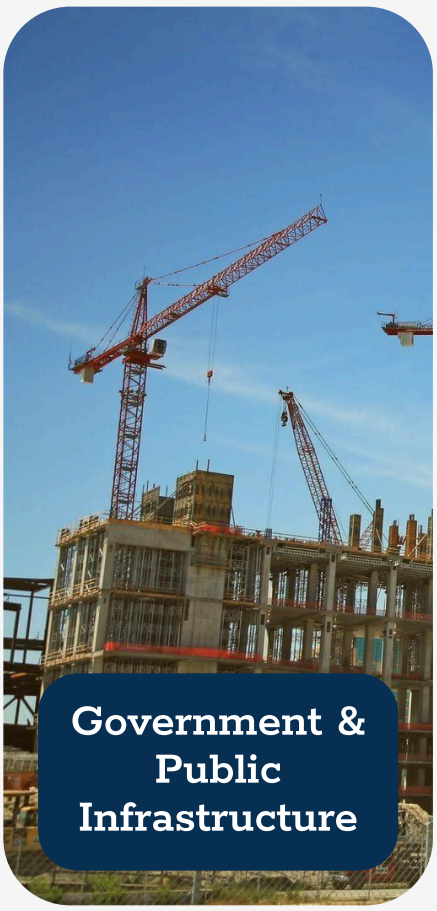

Progress is monitored throughout implementation, allowing the project team to identify issues and coordinate corrective action where necessary.

# Our Principle

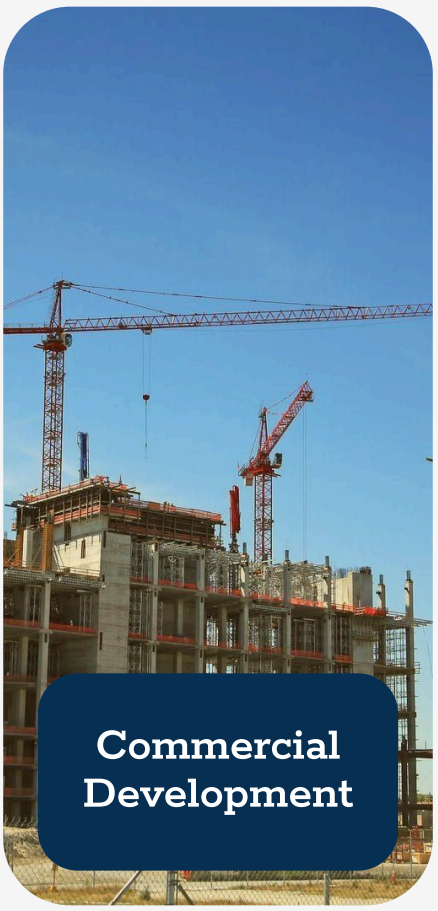

Plan carefully. Build responsibly. Communicate clearly. Deliver professionally.

# SECTORS WE SERVE

## Government & Public Infrastructure

We support construction and infrastructure requirements associated with public facilities and development initiatives.

## Commercial Development

Commercial buildings require practical design, efficient construction and attention to long-term functionality. Somara can support commercial clients from planning through construction.

## Residential Development

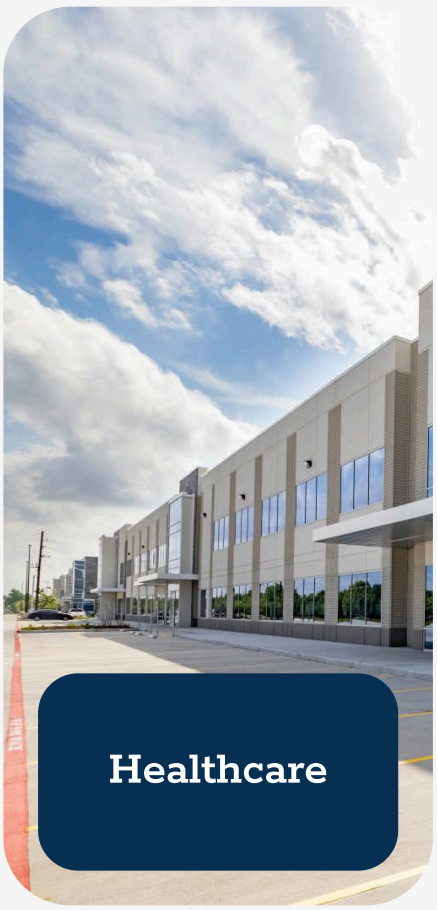

We provide construction and engineering solutions for residential buildings and related infrastructure.

## NGOs & Development Organizations

Somara can provide engineering and construction support for development projects implemented by NGOs, humanitarian organizations and development partners, subject to project requirements.

# SECTORS WE SERVE

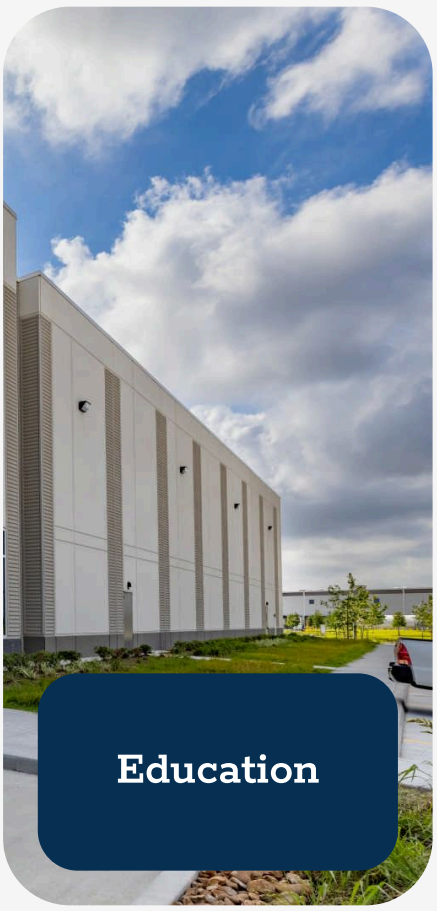

## Healthcare

Healthcare facilities require careful attention to functionality, hygiene, safety and technical requirements. We support construction and facility-development projects according to client specifications.

## Institutional Facilities

We support construction and renovation requirements for offices, community facilities, organizations and other institutional clients.

## Education

Schools, training facilities and educational institutions require safe, functional and durable environments. Our construction services can support the development and improvement of these facilities.

## Hospitality & Commercial Facilities

Hotels, guesthouses, restaurants and other hospitality facilities require construction solutions that combine functionality, durability and quality.

# HEALTH, SAFETY, QUALITY & ENVIRONMENT

## Building Responsibly

Somara recognizes that successful construction is measured not only by the completed structure but also by the way the project is delivered. We therefore place importance on health and safety, quality management, responsible site practices and environmental awareness.

## Health & Safety

Our approach is to identify potential hazards, promote safe working practices and ensure that project personnel understand their responsibilities on site.

***Safety considerations include:***

- Safe site organization
- Appropriate personal protective equipment
- Safe handling of materials and equipment
- Site access and movement controls
- Worker awareness and supervision

## Quality

- Suitable materials
- Proper workmanship
- Technical supervision
- Compliance with project specifications
- Inspection and monitoring
- Corrective action where required

## Environmental Responsibility

Construction activities can affect surrounding communities and environments. We seek to minimize unnecessary waste, manage construction materials responsibly and maintain appropriate site practices.

## Community Consideration

Where projects are implemented within or near communities, we recognize the importance of respectful site management, minimizing disruption and maintaining professional relationships with local stakeholders.

# Organizational Structure

# CLIENTS & PARTNERSHIPS

- Government & Institutions
- Private Companies
- NGOs & Development Organizations
- Institutional & Commercial Clients

## Building Long-Term Relationships

Somara recognizes that construction is fundamentally a relationship-driven business. Successful projects depend on effective cooperation between clients, consultants, contractors, suppliers, authorities and communities.

**We therefore seek to establish relationships based on:**

- Professional communication
- Transparency
- Reliability
- Technical cooperation
- Respect for contractual responsibilities
- Timely response
- Long-term partnership

# WHY SOMARA?

A Dependable Engineering & Construction Partner

## → Local Understanding

Operating within Somalia gives Somara an understanding of local working environments, project conditions and practical construction requirements.

## → Engineering-Led Approach

We place engineering and technical planning at the center of project delivery, helping ensure that construction decisions are properly considered before implementation.

## → Quality Focus

We believe quality is created through proper planning, suitable materials, competent workmanship and continuous supervision.

## → Professional Project Management

Our approach emphasizes coordination of people, resources, schedules, materials and technical requirements throughout the project.

## → Responsible Construction

We recognize our responsibility toward workers, clients, communities and the environment in which projects are delivered.
